

Sealing material type GYSO for tapping fittings

8349

Application

- When installing tapping sleeves to pipes with an external cement coating, the open space next to the seal must be protected with a sealing compound in order to protect the pipe against corrosion.

Characteristics

- Visco-plastic, and resistant to aging, weathering and UV with rapid skin formation
- Skin formation after approx. 10 minutes
- Hardening time 3mm every 24 hours
- The cartridge fits into all commercially available filler guns

Caution

- When gluing, the material must be applied in beads withø approx. 5mm.
- The substrate must be firm, dry and free from dust, oil and grease.
- Do not use under +5°C .
