

Flap valve synthetic Etertub

8631

Application

- Attach directly onto the PE / PVC pipe with plug-in sleeve coupling.
- Flood water closure, also known as a flap valve
- for reservoir outlet or other pipe lead-throughs
- External joint prevents any blockages through the free discharge.

Characteristics

- The special design prevents animals and debris entering through the mouth of the waste water pipe.
- The flap valve does not work under water (the weight of the flap panel is not heavy enough).

Material

- Flap: HDPE

Caution

- The flap valves are sent directly to you from Etertub AG Bilten (excl. transport costs).
