

Hawle volumetric measuring device

9700

Application

- The purpose of the measurement device is primarily that of flushing out water pipes via hydrants. Depending on the situation, one uses either a Storz 55 or Storz 75 connection via the fire brigade hose.
- A manometer is respectively installed with a Storz 55 and Storz 75, which displays the inlet pressure during the operating mode. The water flow rate of the corresponding inlet pressure can be read in m³/h or l/min with the help of the assigned flow table. The accuracy of the measurement is $\pm 4\%$.

Characteristics

- Robust
- Easy to handle

Material

- INOX
